

Professional summary

Passionate Software Developer with a strong background in **Python (Data/Backend)** and **Java Spring Boot**. Proven experience in designing scalable architectures, automating complex data pipelines, and integrating Cloud solutions (GCP/AWS). Combining technical expertise in **Data Engineering** (ETL, BigQuery) with a history of effective teamwork in agile environments and sports management, I am resilient, adaptable, and driven to contribute to cutting-edge technological advancements.

Key skills

- **Backend Development** – Proficient in Java 17 with Spring Boot with 2 years and a half of experience building scalable web applications in a microservices architecture, with knowledge in Python and TypeScript.
- **Artificial Intelligence & Machine Learning** – Knowledgeable in **AI model development**, **data analysis**, and **optimization for intelligent systems** improving my knowledge obtained in the university with side projects.
- **DevOps & CI/CD** – Experience with containerization (Docker), automation, and deployment pipelines to ensure smooth software delivery for 2 years and a half.
- **Agile Development & Team Collaboration** – Experienced in Scrum methodologies, engaging closely with the clients and mentoring team members.
- **Software Architecture & API Development** – Strong understanding of designing RESTful APIs, defined security protocols, and reaching system scalability.
- **Problem-Solving & Debugging** – Ability to troubleshoot complex issues and optimize software performance under pressure.

Employment History

Business Architecture Analyst (Banking Sector), Accenture, Madrid Spain

(July 2025 - Now)

Backend Developer and Data Engineer within a specialized 4-person agile team for a major banking client. Contributing to the development of a "Unified Backlog" solution to centralize strategic risk management data.

- **Python Data Engineering:** Develop and maintain ETL pipelines using **Pandas** and **OpenPyXL** to ingest, clean, and normalize disparate Excel-based backlogs from multiple international geographies (Spain, Mexico, Latam).
- **Cloud Integration (GCP):** Collaborate on the integration with **Google BigQuery** for high-volume data warehousing, implementing **WRITE_TRUNCATE** strategies and schema management to support advanced analytics.
- **Data Integrity & Logic:** Implement complex algorithms using **Regex** and **MD5 hashing** to generate unique identifiers for programs and epics, ensuring referential integrity and tracking "orphaned" records across dataset versions.
- **Automation & API:** Engineer automation scripts to generate CSV payloads for **Jira** bulk imports and assist in developing REST API endpoints to expose processed data to frontend consumers (Vue.js).
- **Business Logic Implementation:** Translate banking business rules into Python logic, including automatic date calculation (Start/End of month logic) and hierarchical mapping of strategic initiatives.

Backend Software Developer, Getronics, Valladolid Spain

(Mar 2022– Aug 2024)

Working in a team of 10 people, for the client **Ministry of Education of Castilla y León** in the project **Stilus**, the new integrated system for the management of school education in Castilla León offered by the Ministry of Education.

reporting under the management of the software architect.

- Integrated and maintained scalable **RESTful APIs** using **Spring Boot**, ensuring high performance and security with **Spring Security** and **ADFS**.
- Implemented three **interactive user interfaces** with **Angular**, enhancing user experience and front-end performance.
- Mentorship of **four intern developers**, assisting in troubleshooting, onboarding, and teaching best coding practices during internship.
- Collaborated closely with the **Ministry of Education of Castilla y León** as client of the project in **Scrum meetings**, gathering requirements, defining technical specifications, and aligning development with business goals.

- Collaborated directly with Peñalara, a specialized timetable generation company, on the migration and integrity validation of schedules using **XML** and **XSD** ensuring and validating the persistence of relational data throughout the process.
- Influenced to **database management**, optimizing over 50 SQL queries and guaranteeing data integrity for critical applications.
- Co-ordinated in **DevOps processes**, streamlining over 10 CI/CD pipelines and improving deployment workflows for ensure all the environments deploys and control all the versions.
- Gained hands-on experience with **Java and Spring Boot**, applying best practices for back-end development.

VOLLEYBALL & TECHNICAL OPERATIONS EXPERIENCE *Royal Spanish Volleyball Federation | Valladolid, Spain | Sep (Sep 2019 – Aug 2024)*

Combined experience demonstrating leadership, technical innovation, and ability to work under pressure.

- **Real-time System Engineering:** Designed and optimized a scoreboard automation system using **Node.js** and RTMP servers to insert real-time scores into live streams. Deployed solutions on **AWS** and integrated with video encoders.
- **Technical Management:** Oversaw the installation and maintenance of electronic scoreboards and technical equipment across 16 courts and 5 venues simultaneously during major national events.
- **Officiating:** Refereed national/international competitions and served as a scoresheet official for the Spanish Superliga 2, ensuring strict adherence to regulations.

Education

Coventry University, United Kingdom

BSc (First Class Hons) Artificial Intelligence

- **Project Management & Agile Methodologies:** Planning, executing, and managing AI-driven projects using **Scrum, Kanban, and risk assessment techniques** to ensure successful delivery.
- **Machine Learning & Deep Learning:** Development and training of **AI models using Python, TensorFlow, and scikit-learn** for predictive analytics and data-driven decision-making.
- **AI Ethics & Responsible AI Development:** Understanding of bias mitigation, fairness, and ethical implications in AI-driven solutions.
- **Data Science & Big Data Analytics:** Processing, analysing, and visualizing large datasets using **Pandas, NumPy, and SQL**, optimizing insights for AI applications.

IES Ribera de Castilla, Spain

Higher National Diploma in Web Application Development • Sep 2020 – Jun 2022

- **Full Stack Web Development:** Design, implementation, and maintenance of **web applications using Java, JavaScript, HTML, CSS, MongoDB and SQL**.
- **Database Management:** Design, normalization, and optimization of relational databases, including **stored procedures and indexing strategies**.
- **Software Deployment & Hosting:** Configuration and deployment of applications in **on-premise and cloud environments**.

Hobbies & Interests

- **Volleyball** – Passionate about volleyball since childhood, continuously seeking opportunities to participate, train, and contribute to its growth. Interested in how technology can enhance the sport and make it more engaging for a wider audience.
- **Machine Learning & AI Research** – Passionate about exploring new advancements in artificial intelligence and automation.
- **Web & Mobile Application Development** – Always innovating on side projects to improve skills and experiment with new technologies.

Languages

- **Spanish:** Native
- **English:** B2 (Certified), with significant improvement through studies in the UK and continuous learning daily, pre.
